Tentative Thematic Schema:  
Handbook of Global Leadership and Followership

RATIONALE
Leadership and followership behaviors, functions, and roles are taught and practices around the world from values-based and cultural perspectives. In other words, they are culturally bound. Our goal in this handbook is to first chronicle the differences in values, cultural habits, models, and traditions in leading and following, and then together discover ways to integrate leadership and followership on interpersonal, group, organizational, and intercultural or international domains, for the global world that is highly diverse and multi-modal/multivalent, yet inclusive and collaborative.
