Generativity in Data Infrastructures: Exploring Tensions in Linked Health Data in Medical Genetics Initiatives

(joint work with M. Lynne Markus, Bentley University)

Digitization has become nearly synonymous with generativity in the information systems literature and more broadly in organizational research addressing digital infrastructures and platforms. Generativity is associated

- New integrated system

Migration to AOM@connect

- Migration to connect very soon (it will be **mandatory**)
- Members required new networking tools
- Overall idea of engaging members all year long (what we've been trying to do with OCIS in the past)
- Three areas under development:
  - DIG website (common template, some customizations – see examples)
  - DIG member community (listserv functionalities improved)
  - DIG exec committee community (area to collaborate online).
  - AOM Will keep the history of members, past members etc.

Migration to AOM@connect

- Example of a community that is already on the new platform
