## Human-Centric Constituents in Times of Decentralization

Blockchain allows the study of exchanges between individuals, mainly trust, accountability, and provable fairness, along with, advancing and enabling new incentive structures.

This article collection invites conceptual and empirical papers exploring the dynamics of human behavior and human-centric systems within decentralized and democratized blockchain-enabled ecosystems providing novel insights on the human and behavioral side of DLT.

The first peer-reviewed academic journal on blockchain from a global academic publisher, *Frontiers in Blockchain* aims to unite both academia and industry to drive blockchain research and innovation. All submissions are peer reviewed by our multidisciplinary Editorial Board of blockchain experts, and published Open Access.

We offer:

- A fully Open Access platform for your research
- An average Peer Review time of 90 days from submission to final decision
- Collaboration opportunities within our editorial network
- 7 Specialty Sections focusing on:
  - Smart Contracts
  - Blockchain Technologies
  - Blockchain for Good
  - Blockchain for Science
  - Financial Blockchain
  - Non-Financial Blockchain
  - Fourth Industrial Revolution
